

# NEW VERSION OF PROCONCEPT ERP 10.2

## CUSTOMIZATION, INNOVATION, AND SIMPLICITY

### Your advantages at a glance:

- Company portal
- Ribbon integration
- Rapid access
- Bookmark organization
- Improved processing fluidity
- New tables and pivot tables
- Customized displays
- Grouped user preferences
- Windows Seven – Oracle 11G compatible

We put the accent on user comfort in ProConcept ERP version 10.2, emphasizing usability and simplicity. With our new highly intuitive interface created to increase the efficiency with which you carry out your daily tasks, and decreasing the time to hit the ground running for new users.

Giving the user the right information at the right moment, presenting them with the tasks that are important allowing them a large flexibility in their workspace: who better than the users themselves to know what they need?

Company portal, new graphics, functional reorganization, graphical integration of components and many more new features are contained in the version 10.2.

### COMPANY PORTAL – MY WORKSPACE

The new ProConcept ERP portal lets you organize your workspace as you want it based on predefined roles. From the manager who needs a global view of the data in the ERP, to the operator who needs to handle their daily tasks, the portal gives easy access to all the information in the ERP using a simple concept: bring the required information to the use at the right moment. A true launch pad for web pages, dashboards, RSS flows, and management applications, the new portal lets you add your favorite information sites, stay in touch with your partners using social networking, track your financial trading activities, or even the weather forecast. All without leaving the portal.

# “In ProConcept ERP, the reality of the concept of a global information system has been the norm for a long time.”

## INTUITIVE, SIMPLE NAVIGATION

The seamless integration of all the modules combined with the intuitive navigation allows the user to access their information in a timely manner to work efficiently. In ProConcept ERP, the reality of the concept of a global information system has been the norm for a long time.

## RAPID ACCESS

The navigation tool bar allows rapid launching of your favorite applications. Organize your favorites as you like and search by keyword, control panels or printout reports.

All running applications are visible in the bar and can be “activated” by clicking on their icon.

This bar also gives you access to all the applications to which you are authorized.

## INTEGRATION OF RIBBONS

Ribbons are visual, context sensitive, and intuitive, they allow rapid access to the different elements of the ERP. The active company, reporting, and transactions as well as different actions or applications, are directly available from different icons.

## PROCESSING FLUIDITY

By adding context sensitive access it is now possible to complete information without leaving the current processes. During the creation of a sales order, the payment condition, specific to this one order, is missing: using a shortcut, you can create it simply without leaving the processes.

The ease of use has been vastly improved: no more searching for the right application, they run naturally from the field in question.

## NEW TABLE AND PIVOT TABLE FUNCTIONALITIES

In order to further increase your efficiency, numerous tables and pivot tables and new components already in the application have been integrated to allow you to explore other ways of working.

- Search results can be grouped, just by “dragging and dropping” from one or more columns to easily summarize information. Sort functions, advanced filters, formulae (min-max-count, etc.) as well as the possibility to choose the display mode (data, graphs, cards) give you innovative ways to work with this product.
- Integrated shortcuts show the user all the options possible in a given context, from exports to Excel, multiple selections, BOM queries, or graphical displays of information.
- The page layout can be saved at any time, allowing you to keep specific screen presentations. The user can also use screen presentations developed by their IT service or colleagues, the aim being to make collaborative work mutually beneficial.

## PREFERENCES

The choice of application theme, the size of the font, the ribbon display, and all the other user preferences are grouped in “My preferences” and easily modified.

## COMPATIBILITY

The arrival of Windows Seven in 2010 and the new version of Oracle (11G) can be handled with peace of mind by IT managers: ProConcept ERP is fully compliant with version 10.2.
